

Calculating Christmas

Group 3: Sina Ghadiri | Michell Li | Sahithi Tupuri | Joseph LaMagna | Sujaya Darke | Paul Sommerdorf

ToysRus

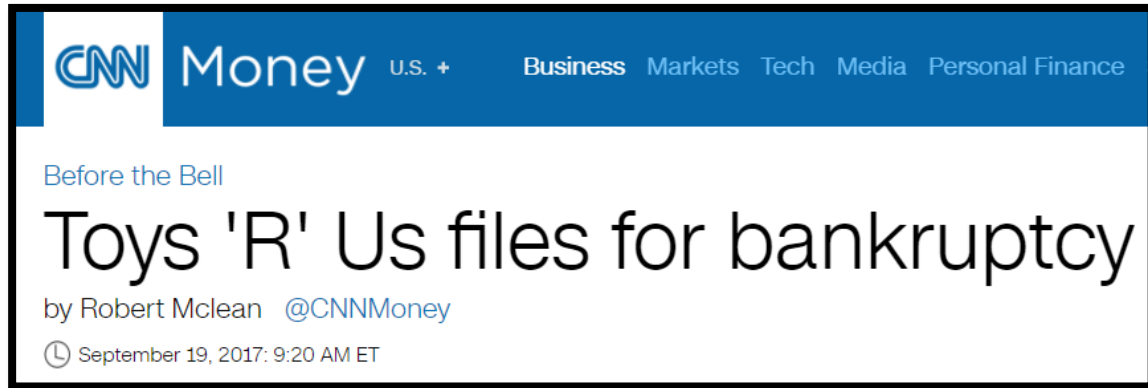

Overview

A warm, cozy living room decorated for Christmas. On the left, a large evergreen tree is covered in lights and ornaments, with a star on top. A wooden rocking chair sits in front of it. To the right, a stone fireplace mantel is adorned with a garland of lights and red bows. Four red stockings hang from the mantel. Below the mantel, a fire burns in the hearth. On the mantel, there are wrapped gifts and a poinsettia plant. At the base of the tree, more gifts and a small teddy bear are visible.

Problem Overview

The Situation

Toys 'R' Us has been struggling for over a decade

Increasing competition from giants such as Walmart and Amazon

How can Toys 'R' Us use **social media analytics** to increase profitability?

Group 3

Problem

Process

Insights

Recommendations

Conclusion

The Solution

Optimize the toys currently in stores

- Cross reference our predictions with what Toys 'R' Us is currently advertising
- Stock up on the successful toys

Create a model to predict toy success

- Toy success can be difficult to predict
- Use this model to make smarter inventory decisions

Advertising more effectively

- Understand which toy will be the 'hot' toy of the season
- Advertise this toy so people will associate Toys 'R' Us with it

Conclusion

Process Explanation

A photograph of a tangled string of multi-colored Christmas lights (red, green, blue, yellow) against a dark background. A semi-transparent dark blue horizontal band is overlaid across the middle of the image, containing the white text 'Process Explanation'. The lights are out of focus in the background and sharper in the foreground, with some lights glowing brightly.
